Quassel IRC - Bug #1092

UTF-8 characters make links ending

08/20/2011 09:24 AM - cpuesser

Status:	Rejected	**Start date:**	08/20/2011
Priority:	Normal	**Due date:**	
Assignee:	al	**% Done:**	0%
Category:	Quassel Client	**Estimated time:**	0.00 hour
Target version:			
Version:	0.3.0.x	**OS:**	Any

Description

When there are UTF-8 charakters in a link it's not clickable, because quassel ends the link before this character.
For example in this "http://www.￭.ws/pbp" link quassel ends it before the dot after the www

History

#1 - 03/05/2014 12:20 AM - al

- Status changed from New to Rejected

- Assignee set to al

- Version changed from 0.8-pre to 0.3.0.x

There are a lot of UTF-8 characters that actually are recognized as valid, just not those from the Symbol category. I don't see a feasible way to support this without causing way more false positives.
