

Quassel IRC - Bug #1190

Query and Channel events are not being handled separately

09/25/2012 11:41 AM - rikai

Status:	New	Start date:	09/25/2012

Version:	0.7.3		
Description			
If you set certain events to be hidden in a query and choose 'set as default', this applies the settings to both channels and queries. I find this to be incorrect behavior. There are many cases where you want one set of defaults for queries, and another set of defaults for channels. A simple example, some people would to be able to hide quits in all queries, but keep them in channels.
