Target version:	0.2.0-alpha4			
Version:	0.13.1		**OS:**	Any

Description

I think it would be pretty nice if the client could save and load style settings automagically. This should be actually pretty easy to do:

QStyleFactory::keys() returns a list of available styles.
http://doc.trolltech.com/4.0/qstylefactory.html#keys

The Style can be simply set using QApplication::setStyle(const QString &styleName).
http://doc.trolltech.com/4.3/qapplication.html#setStyle-2

Hint from the Qt-Docs:
Warning: To ensure that the application's style is set correctly, it is best to call this function before the QApplication constructor, if possible.

The Settingspage should note that this setting needs a restart of the client to take effect.

Phon: I'm assigning this to you, as you've already caught some experience with the settingspages and stuff like that. Please reassign if you don't like it.
