

Quassel IRC - Bug #1309

Slow initial synchronization on a core with very long logs, plus connection loss

Description

I've been using the same quassel core database for a few years, now, and the initial synchronization when connecting to the core got slower and slower over time. Nowadays it takes as much as 300s for the initial connection (shown then as Latency).

During this connection, it often loses connection to the IRC servers and reconnects afterwards.

My quassel-storage.sqlite has a size of 1003 MiB.

History

I had the same issue. It was resolved by switching to Postgres as the backend.

Maybe I'll try that then. Thank you!
