

Quassel IRC - Feature #1327

The search box should search the complete log

| When I look for a phrase, the search box currently looks for it in the currently fetched part of the buffer. It probably should search the complete channel log instead and <i>filter</i> the result. (This is closely related with issue <a href="#">#1083</a> , but that one probably refers to a separate dialog, while I'd like to be able to filter within an active buffer). |     |                        |            |
