Quassel IRC - Bug #1332

Quassel crash on saving new server

01/13/2015 10:01 AM - ThePsionic

Status:	New		**Start date:**	01/13/2015
Priority:	Urgent		**Due date:**	
Assignee:			**% Done:**	0%
Category:	Usability		**Estimated time:**	0.00 hour
Target version:				
Version:	0.10.0		**OS:**	Windows

Description
When I try to save a new server, Quassel crashes. This happens whether I do or do not enter a server password, whether or not I use the default port, and whether or not I use SSL. This has been tested on both Quassel 0.10.0 and Quassel 0.11.0 on Windows 64-bits.

History

#1 - 01/13/2015 10:08 AM - ThePsionic

Note that this happens on clean installs, nothing has been changed. Only Quassel itself has been installed, not Core or Client (a.k.a. minimal install). As far as I am aware, no crash logs are generated.

#2 - 01/13/2015 05:08 PM - ThePsionic

Adding servers does work when one has already been configured by the setup wizard.

#3 - 08/27/2017 04:33 AM - digitalcircuit

I can confirm this still happens in Quassel 0.13-git-master (unreleased).

1. Compile monolithic and/or client and core
2. Run in fresh directory, e.g.

```
--configdir="$(mktemp -d)"
```

3. Cancel setup wizard
4. Go to File → Networks → Configure Networks
5. Add a network
6. Crash

Talking with justJanne on IRC, it also happens if you delete an identity in use. Core doesn't crash, but client/monolithic do.

The client needs to handle missing identities better; warning and/or offering to set up a new identity if one's missing/been deleted from a network.
