| Description | | | |
| <p>Hi,</p> <p>I've had Quassel (running with the quasselcore-0.12.2) set up for a while, but have recently tried connecting to an SSL-only IRC server. When I try to connect, the client shows:</p> <p>[10:04:44] * Connection failure: Error creating SSL context ()</p> <p>[10:04:44] * Connection failure: Unable to init SSL Context:</p> <p>And the log from the server reads</p> <p>2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSLv23_client_method</p> <p>2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSL_CTX_new</p> <p>2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function SSL_library_init</p> <p>2016-05-11 09:04:44 Warning: QSslSocket: cannot call unresolved function ERR_get_error</p> <p>I have openssl and openssl-devel installed:</p> <pre>1. rpm -qa grep openssl openssl-1.0.1e-42.el6_7.4.x86_64 openssl-devel-1.0.1e-42.el6_7.4.x86_64</pre> <p>Let me know if there's more info I can provide</p> | | | |
