

Quassel IRC - Bug #1434

Mac monolithic client crash when trying to add certificate

03/29/2017 11:11 PM - aleding

Status:	New	Start date:	03/29/2017
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		OS:	Mac OS X
Version:	0.12.4		
Description When trying to add a certificate to an Identity via Preferences --> IRC --> Identities --> Advanced --> Use SSL Certificate --> Load , the app crashes. The specific point where the crash occurs is right after clicking " <i>Open</i> " after choosing the certificate from the Finder window presented after clicking the " <i>Load</i> " button. The same issue was cross-tested in Ubuntu v12.x with the Linux monolithic client v0.8.0 (<i>installed via Ubuntu Software Center</i>) and it does not occur . I performed this test no less than 5 times just before submitting this defect and while the cert was accepted on the 2nd test (<i>in .cer format</i>), the other 4 attempts all resulted in a crash. While I did attach 2 different crash reports from today's testing, please understand that I have collected several more crash reports since I first encountered this issue just under a week ago. TEST ENVIRONMENT MACHINE CLASS: Mac Pro CPU: 12-core Xeon RAM: 64 GB OS: OS X 10.8.5 (Mountain Lion) CERT FORMATS ATTEMPTED: .cer (<i>exported from Keychain</i>), .crt (<i>gen'd via OpenSSL</i>)
