Description <p>I have hundreds of query windows, so I setup a chat list to only show queries that have a new message. Once I click on them, I can reply. But then the state is "no new message" and it disappears from my chat list.</p> <p>Finding this specific query again is extremely tedious. (Searching by buffer name is not helping either as I don't always remember the name)</p> <p>This ticket is just to outline my underlying issue, and perhaps to discuss non-issue-specific ideas regarding this topic.</p> <p>I have created 1 bug and 2 feature suggestions to solve my problem:</p> <ul style="list-style-type: none">- #1450- #1451- #1452 <p>I am unfortunately not in a position to contribute code, but would like to offer a small bounty of EUR 100 for completing the above 3 issues or coming up with and implementing an alternative solution that solves my problems (within the next 6 month).</p>
