<b>Description</b>			
<p>It would be useful to be able to configure the allowed TLS cipher suites for both quassel-to-IRCd connections and for quassel-client to quassel-core connections.</p> <p>This can be done through <code>QSslConfiguration::setCiphers</code>. I suspect the bulk of the work for this would be the UI plumbing.</p> <p>An example of how this is done can be found in Mumble (another Qt app): <a href="https://github.com/mumble-voip/mumble">https://github.com/mumble-voip/mumble</a></p> <p>Mumble's <code>murmurd</code> just reads from a config file, though. They don't plumb it through to any kind of graphical UI.</p>
