

Quassel IRC - Bug #1900

Unable to use quassel to core on local network on macOS 15

12/25/2024 12:27 PM - reedy

Status:	Closed	Start date:	12/25/2024
Priority:	Normal	Due date:

Target version:		OS:	Mac OS X
Version:	0.14.0		
Description macOS 15 seems to put restrictions on apps accessing devices on the local network, giving a popup to allow access. There doesn't seem to be a way to manually allow an app (which feels like an oversight), and Quassel doesn't currently request the necessary permissions. Which means I can't currently use my locally hosted quassel bouncer (as is)... https://apple.stackexchange.com/questions/475737/how-can-i-manually-allow-local-network-access-for-an-app The developer would have to update the app with a "multicast entitlement" so that it can be granted access by the user. https://developer.apple.com/forums/thread/663875

Or is it just macos being useless... And didn't show me this before?

After a reboot, it did... and it's working now...

#2 - 01/02/2025 04:11 AM - genius3000

- Status changed from New to Closed

- OS changed from Any to Mac OS X
