Description			
Paper io is a competitive multiplayer game that turns a simple grid into a tense arena of strategy and reflexes. With minimal visuals and straightforward controls, the game focuses entirely on player decisions, making every match feel intense and unpredictable. The Main Objective in Paper io The goal in paper io is to control as much territory as possible while avoiding elimination. How Territory Is Gained Players expand by moving outside their base and drawing a line. When the line reconnects with the original area, the enclosed space becomes owned territory. Why Every Move Is Risky Outside your territory, your line is vulnerable. Any opponent who crosses it instantly eliminates you, regardless of how strong your position was moments before.
