| <b>Category:</b>                                                                                          | General / Unspecified | <b>Estimated time:</b> | 0.00 hour |
| <b>Target version:</b>                                                                                    | 0.3.0                 | <b>OS:</b>             | Any       |
| <b>Version:</b>                                                                                           | 0.13.1                |                        |           |
| <b>Description</b>                                                                                        |                       |                        |           |
| When connecting to the core the client doesn't finish getting the userstates.                             |                       |                        |           |
| This is the Output of the Core:                                                                           |                       |                        |           |
| SignalProxy::handleInitRequest() received initRequest for unregistered Object: "IrcUser" "7/Wellness BNC" |                       |                        |           |
| Restarting the core does help in this situation, but i think this isn't normal.                           |                       |                        |           |

History

#1 - 08/05/2008 10:48 PM - EgS

already fixed in current git ;)
