

## Quassel IRC - Feature #434

### show "online" as "active"

12/04/2008 01:08 PM - pennywise

<b>Description</b> If you have your own buffer view with s.th. like this:  Network: All Restrict Buffers to: Channel Buffers & Query Buffers <input checked="" type="checkbox"/> Hide inactive Buffers <input checked="" type="checkbox"/> Add new Buffers automatically <input checked="" type="checkbox"/> Sort alphabetically Minimum Activity: New Message  then you have s.th. like "unread messages"  Now I'm using bitlbee to have IM like ICQ/AIM/MSN as well, and so I have a lot of query buffers open to different contacts. With the away/online/offline symbols I can see very good if they are online, but I always have to go into the global buffer to get to the contact I want to chat with. When he said s.th. it's not a problem, because he's in the "unread messages", but if I want to start a converssation I have to choose him from the global/general buffer.  So my feature-request is:  Add a "Show only online/away query buffer" hook, so that I have a list of IM-People currently "online".			

### History

#### #1 - 12/04/2008 01:32 PM - pennywise

Note to myself: Try more.

Here's a solution:

- 1) Create a new buffer "bitlbee".
- 2) choose your bitlbee-network
- 3) Restrict buffers to: channel & query buffers
- 4) hook at: hide inactive, add new automatically, sort alphas.
- 5) Minimum activity: no activity

Done. An "IM"-View

#### #2 - 01/13/2009 08:43 PM - EgS

- Status changed from New to Rejected

As you already found a solution, I'm closing this issue.
