Description

Currently, you can adjust the width of any "element" within the chatwindow by moving the "frames". For example:

```
[11:32:41] <username> Can someone read this?
[11:35:54] <username2> yes, I guess so
```

where the time column is one frame, the usernames, and the "chatlines". I would like to have a feature, so when you doubleclick on that line between the username column and the chatline column, the username column automatically adjust its width to the nickname which needs the most space. In the example on top, it would be "username2".

I try to paint some ascii-art:

BEFORE: (where _|_ is the frame border)

```
[11:32:41] | <userna | Can someone read this?
[11:35:54] | <userna | yes, I guess so
```

AFTER dblclick:

```
[11:32:41] | <username2> | Can someone read this?
[11:35:54] | <username>  | yes, I guess so
```
