Description

When I compile Quassel against kdelibs (USE=kde in gentoo) I get:
quasselclient: symbol lookup error: /usr/kde/live/lib64/kde4/plugins/styles/oxygen.so: undefined symbol:
_ZNK6KStyle26standardIconImplementationEN6QStyle14StandardPixmapEPK12QStyleOptionPK7QWidget

I have two KDE installation, one under prefix /usr/kde/live (from KDE svn trunk), that I use, and 4.2.1 non-prefixed, that quassel
probably compiled against.

Compiling it without kdelibs works fine..

Happens with both 0.4 and from git.
