Quassel IRC - Bug #715

Never generate a Buffer with a comma

06/04/2009 06:19 PM - valuial

Status:	Resolved		**Start date:**	06/04/2009
Priority:	Normal		**Due date:**	
Assignee:	EgS		**% Done:**	0%
Category:	Quassel Core		**Estimated time:**	0.00 hour
Target version:	0.4.3			
Version:	0.4.2		**OS:**	Any

Description

The comma separator in the recipient list of some messages is not evaluated correctly, or intuitivly.
For example:

euIRC, unlike freenode, supports sending NOTICE messages to multiple recipients as in rfc2812 (see post scriptum). But quassel creates a buffer with the name of the complete list, instead of adding the message to each buffer individually:

```
/notice target1,target2 message with spaces
```

is correctly translated into irc-protocol

```
NOTICE target1,target2 :message with spaces
```

but the buffer "target1,target2" is created, which should not happen.
For PRIVMSG I could not reproduce this erroneus behaviour - differend code here?

PS: on a sidenote: Freenode breaks rfc not accepting multiple recipients (nicks) in a PRIVMSG as defined in rfc1459 4.4.1 "Private Messages" and both PRIVMSG and NOTICE in rfc2815 2.3.1 (see description of msgtarget) used again in 3.3.1 Private Messages and 3.3.2 Notices.

History

#1 - 06/07/2009 11:59 PM - EgS

- Status changed from New to Confirmed

- Assignee set to EgS

Confirmed.

Both PRIVMSG and NOTICE (and only those 2) can have multiple targets.

```
msgtarget  =  msgto *( "," msgto )
msgto      =  channel / ( user [ "%" host ] "@" servername )
```

#2 - 06/28/2009 04:48 PM - EgS

- Status changed from Confirmed to Resolved

- Target version set to 0.4.3

Fixed in git:
