Quassel IRC - Feature #771

SSL Certificate collecting method

08/18/2009 02:58 PM - Crazy_Hopper

Status:	Resolved		**Start date:**	08/18/2009
Priority:	Normal		**Due date:**	
Assignee:	Sputnick		**% Done:**	0%
Category:	Usability		**Estimated time:**	0.00 hour
Target version:	0.6.0			
OS:	Any			

Description

When 'add to known hosts' checkbox is ticked, client's config is populated with IP address as a key and QByteArray as a value. In case of core IP address changes, the warning dialog is presented again and again. This scheme makes it impossible to tell client to trust some particular certificate. My suggestion is to store the core address *as it was input by the user* with the certificate fingerprint.
