Quassel IRC - Bug #940

Problem with +foo-Channels

03/18/2010 12:09 AM - Phaidros

Status:	Resolved		**Start date:**	03/17/2010
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	100%
Category:	Quassel Core		**Estimated time:**	1.00 hour
Target version:	0.6.2			
Version:	0.6-pre		**OS:**	Any

Description

IRCnet servers advertise the following parameters: PREFIX=(ov)@+ CHANTYPES=#&!+

Since PREFIX and CHANTYPES are not disjunctive on those servers, CoreBasicHandler::displayMsg() removes accidently the "+" from some channel names (e.g. "+linux.de"), leaving "linux.de" as target, which is, of course, not recognized as a valid channel name. As a result PRIVMSG in such channels are not displayed in the channel's buffer. Still they trigger notifications.

I have modified CoreBasicHandler::displayMsg() to check, if the removal of an alleged prefix leads to an invalid channel name. Nevertheless, since I do not know the IRC protocol very well, this may brake some other features. A patch is included.
