OS:	Any		
Description			
<p>At the moment I am running a small server and would like to have a way to set a limit to how much space the buffer on the core server can take. Either in terms of disk space or in terms of days to keep for each channel.</p> <p>As the number of channels in my list grows, so will the database and it will be a good thing to have a way to control it.</p> <p>Along with this feature, it would be good to have a way to see exactly how much diskspace Quassel uses for the buffers.</p>
